

# FINANCING THE CLEAN ENERGY MOVEMENT

Our vision is a world where everyone can participate in the clean energy movement. By providing low rates and flexible terms on a variety of clean energy products we help people throughout the U.S. afford clean energy and reduce their carbon footprint.

## Solar Electric Systems

By offering up to 100% financing with no money down, our solar loans allow you to swap your monthly electric bill for a monthly loan payment on a solar electric system—which you'll own at the end of the loan repayment period. We provide multiple loans types and flexible rates to fit your needs, apply directly with us or through one of our solar installation partners.

## Electric Vehicles

You can help lead the way to a cleaner tomorrow by driving an electric vehicle that increases fuel efficiency, reduces harmful emissions, and cuts your fuel costs. We offer unbeatable rates to get you into your new EV quickly and affordably. Buyers can take advantage of our rates and flexible terms for both new and used electric and hybrid plug in cars, motorcycles, and trucks.

## Geothermal Heat Pumps

With our geothermal system loans, you can get a highly efficient heating and cooling system for no money down. We offer various loan types and terms to help you offset your monthly electric bill for a monthly loan payment on a geothermal system instead.

## Green Home Improvement

Green home improvement loans help you increase the energy efficiency of your home, lowering your utility bills and your environmental footprint. We offer low rates and flexible terms for a variety of green home improvements such as HVAC systems, water heaters, lighting, windows and more.

## Electric Bicycle

E-bikes are an eco-friendly, inexpensive, and super-fun way to get around town. We offer low rates and flexible terms for new e-bikes, defined as any bicycle that includes an integrated electric motor, but also retains the ability to be pedaled by the rider. [NOTE: Electrified two-wheelers without pedals would be considered electric motorcycles, which are eligible for our clean energy vehicle loans described above.]

## Shared Secure

Our share secured loans are a great idea if you are looking to build credit, need some cash without dipping into your savings, or want to avoid early withdrawal penalties on your Clean Energy CD. Our share secured loans use funds in your Clean Energy savings account or CD account as collateral, thereby allowing you to get a low-rate loan while still earning interest on your deposits.
